

## Material Designs and New Physical Properties in MX- and MMX-Chain Compounds

Filesize: 7.79 MB

### ***Reviews***

*Merely no words and phrases to describe. I really could comprehend almost everything using this created e pdf. Your daily life period will be change once you full reading this ebook.*

## MATERIAL DESIGNS AND NEW PHYSICAL PROPERTIES IN MX- AND MMX-CHAIN COMPOUNDS

To download **Material Designs and New Physical Properties in MX- and MMX-Chain Compounds** eBook, make sure you access the web link under and save the document or gain access to other information which might be relevant to MATERIAL DESIGNS AND NEW PHYSICAL PROPERTIES IN MX- AND MMX-CHAIN COMPOUNDS book.

Springer-Verlag KG Dez 2012, 2012. Buch. Book Condition: Neu. 280x210x20 mm. Neuware - This is the first book to comprehensively address the recent developments in both the experimental and theoretical aspects of quasi-one-dimensional halogen-bridged mono- (MX) and binuclear metal (MMX) chain complexes of Pt, Pd and Ni. These complexes have one-dimensional electronic structures, which cause the various physical properties as well as electronic structures. In most MX-chain complexes, the Pt and Pd units are in M(II)-M(IV) mixed valence or charge density wave (CDW) states due to electron-phonon interactions, and Ni compounds are in Ni(III) averaged valence or Mott-Hubbard states due to the on-site Coulomb repulsion. More recently, Pd(III) Mott-Hubbard (MH) states have been realized in the ground state by using the chemical pressure. Pt and Pd chain complexes undergo photo-induced phase transitions from CDW to MH or metal states, and Ni chain complexes undergo photo-induced phase transitions from MH to metal states. Ni chain complexes with strong electron correlations show tremendous third-order optical nonlinearity and nonlinear electrical conductivities. They can be explained theoretically by using the extended Peierls-Hubbard model. For MMX-chain complexes, averaged valence, CDW, charge polarization, and alternating charge polarization states have been realized by using chemical modification and external stimuli, such as temperature, photo-irradiation, pressure, and water vapor. All of the electronic structures and phase transitions can be explained theoretically. 350 pp. Englisch.
