Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Energy: Work, Heat and Transformations The earlier chapters of this work are self-explanatory. The later ones justify some discussion of point of view. The writer is not a physicist. Educated and trained as an engineer, his call to the teachers chair led him to arrange his views as to natural principles with greater care than is common with engineers. The ideas promulgated in the following pages are in answer to questions received from bright-minded students a dozen years ago questions which were sensibly asked, but which stumped the teacher for years for an adequate, equally sensible reply. His efforts at the comprehension of thermodynamic action have led him to trespass, perhaps, upon the domain of the physicist. For the discussion of matters so intricate as molecular dynamics a thorough familiarity with experimental and mathematical physics might seem indispensable. No one can regret more than the writer his lack of this. His apologies for the consequent shortcomings of this little book are profuse in proportion. Yet, should this situation arouse criticism or doubt, the answer is easy. Why have not the professional physicists long ago done this same thing, that it might have been done far better? The materials, opportunity and demand have long existed. Whatever question may arise as to the significance, or even the definition, of the more recent data of experimental physics, there can be none as to the long established principles of celestial mechanics. There is as little as to the only less venerable data as to thermal processes. For nearly a century there has been virtually no question as to the mechanical nature of heat. Yet these things cannot be accepted...
